

Handout A: Information Sheet

Instructor: Anthony Man–Cho So

September 5, 2016

## 1 General Information

- INSTRUCTOR: Professor Anthony Man–Cho So
  - OFFICE: ERB 604
  - OFFICE HOURS: Tuesdays 3:30pm — 5:00pm, or by appointment
  - EMAIL: [manchose@se.cuhk.edu.hk](mailto:manchose@se.cuhk.edu.hk)
- TEACHING ASSISTANTS:

| Name          | Office  | Office Hours                | Email  |
|---------------|---------|-----------------------------|--|
| Huikang Liu   | ERB 905 | Mondays 9:30am — 11:30am    | <a href="mailto:hkliu@se.cuhk.edu.hk">hkliu@se.cuhk.edu.hk</a>   |
| Xueying Ni    | ERB 905 | Tuesdays 9:30am — 11:30am   | <a href="mailto:xyni@se.cuhk.edu.hk">xyni@se.cuhk.edu.hk</a>     |
| Man–Chung Yue | ERB 905 | Thursdays 9:30am — 11:30am  | <a href="mailto:mcyue@se.cuhk.edu.hk">mcyue@se.cuhk.edu.hk</a>   |
| Qi Zhang      | ERB 905 | Wednesdays 9:30am — 11:30am | <a href="mailto:qzhang@se.cuhk.edu.hk">qzhang@se.cuhk.edu.hk</a> |

- CLASS TIME & LOCATION:
  - Mondays 4:30pm — 6:15pm, in LSK LT3
  - Wednesdays 3:30pm — 5:15pm, in LSK LT1
- CLASS WEBSITE: <http://www.se.cuhk.edu.hk/~manchose/1617/engg5501>
- ONLINE Q&A FORUM: <http://piazza.com/cuhk.edu.hk/fall2016/engg5501>

## 2 Course Objectives

In this course we will develop the basic machinery for formulating and analyzing various optimization problems. Topics include convex analysis, linear and conic linear programming, nonlinear programming, optimality conditions, Lagrangian duality theory, and basics of optimization algorithms. Applications from different fields, such as combinatorial optimization, communications, computational economics and finance, machine learning, and signal and image processing, will be used to complement the theoretical developments. No prior optimization background is required for this class. However, students should have workable knowledge in multivariable calculus, real analysis, linear algebra and matrix theory.

### 3 Course Outline

|   |   |
|---|---|
| <b>Part I: Introduction</b><br>Problem Formulation<br>Classes of Optimization Problems  | <b>Part III: Algorithms</b><br>First–Order Methods for Unconstrained<br>and Constrained Optimization  |
| <b>Part II: Theory</b><br>Elements of Convex Analysis<br>Conic Linear Programming and<br>Nonlinear Programming —<br>Optimality Conditions and<br>Duality Theory | <b>Part IV: Selected Applications</b><br>Combinatorial Optimization<br>Communications<br>Computational Economics and Finance<br>Machine Learning<br>Signal and Image Processing |

### 4 Grading

- **HOMEWORK (60%):** There will be about five homeworks during the term. Typically, they are due two weeks after being assigned. You may take up to two late days during the term. However, once you have used up the late days, **no more late homeworks will be accepted unless prior arrangement has been made with the instructor.**

You are allowed, and even encouraged, to discuss the homeworks with your classmates. However, **you must write up the solutions on your own.** Plagiarism and other anti–scholarly behavior will be dealt with severely. In particular, **you should never copy from previous years’ homework solutions.**

- **FINAL EXAMINATION (40%):** There will be an in–class open–notes final examination for this class. The date of the examination will be determined later.

### 5 Reference Material

There is no required textbook for this class. Lecture notes will be posted on the course website. Below is a list of material for further reading:
