

This short guide is for import the schema (DDL) and mock data into the MySQL. After that you will be able to test SQL queries in MySQL. We assume you already installed the MySQL correctly. If you have not, follow the tutorial 1's slides.

Now let's start from the 8th slides, Control Panel of tutorial 1. Click two 'Start' buttons. Wait until both of the module turn green. Click the 'Admin' button of the 'MySQL' module, and it will open a webpage for you. The rest of works are on the page.

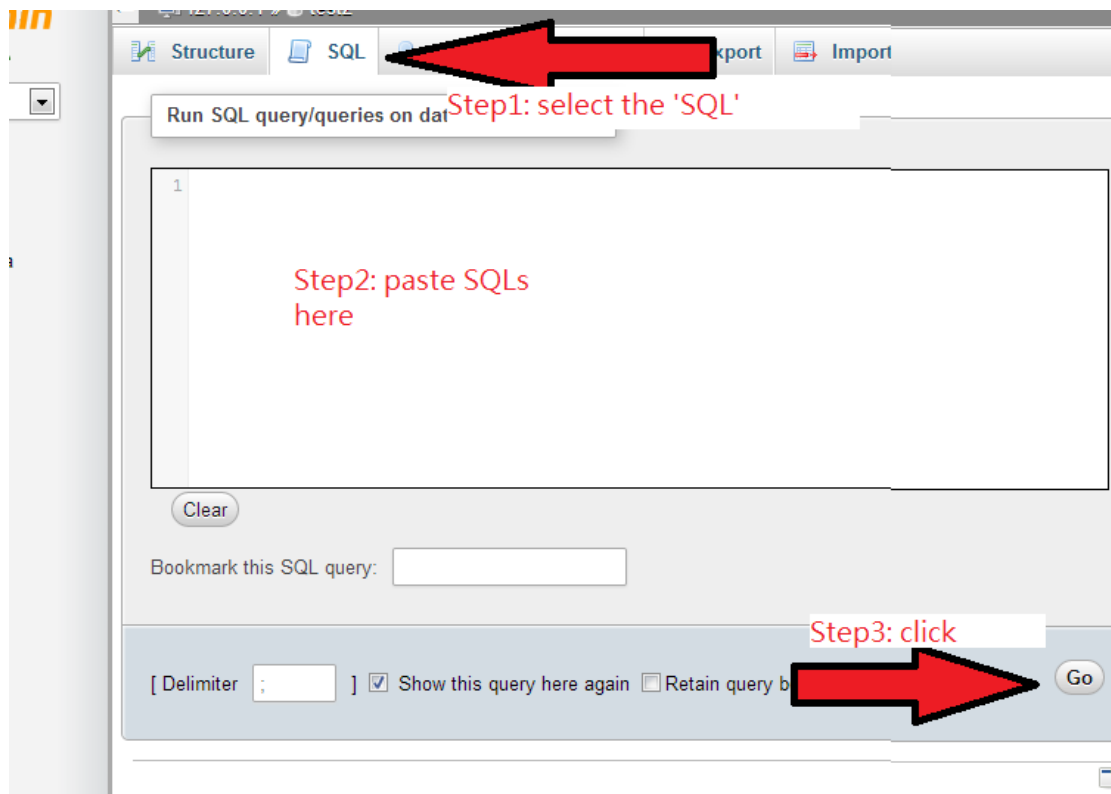

Create a database by following steps

Now you need to execute **both** the DDL.sql and data.sql

There are two alternative ways to execute them:

- Open the file you are going to execute (use any editor you like), and paste it to the SQL windows

- b) Open C:\xampp\php\php.ini, find the line 'upload_max_filesize=2M', change 2M to 3M. Save and close.
Follow the following screen to import files.

127.0.0.1 » test2

Structure SQL Search Query Export **Import** Operations

Importing into the database "test2"

File to Import:

File may be compressed (gzip, bzip2, zip) or uncompressed.
A compressed file's name must end in `.[format].[compression]`. Example: `.sql.zip`

Browse your computer: 未選 Step1: click here
Max: 3,072KiB

Character set of the file: Step2: choose the file

Partial Import:

☒ Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. (This might limit the number of rows imported.)

Number of rows to skip, starting from the first row:

Format:

Format-Specific Options:

SQL compatibility mode:

☒ Do not use AUTO_INCREMENT for zero values

Step3: click

Make sure you executed both and them, and you will see this:

127.0.0.1 » test2

Structure SQL Search Query Export Import Operations Privileges

Table	Action	Rows	Type	Collation	Size
